Cognito form improvement suggestions:

1. The purpose of the form is not stated. The purpose of the form should be stated in title. Title should be "Create new medical insurance user."

2. Personal data fields should be better divided and organised. All fields should be divided in four sections, with four subtitles:

-*Personal info* (first name, last name, SSN, date of birth, date of death, photo, username, maritial status)

- *Address info*(all address information fields)
- *Contact info*(Email, work phone, preferred contact)
- *Health behaviour info* (Health behaviour checkbox list)

3. In SSN field, entered data is displayed as it is entered, in form: xxxxxxxxx. Entered data should automatically be transformed to SSN default format: xxx-xx-xxx.

4. In "Preffered contact" dropdown list, there is option "Home Phone". In form home phone can not be entered. There is no field for home phone number. "Home Phone" field should be added in "Contact" section.

5. Marital status can only be one, so "maritial status" form should be radio button form. It should be possible to select only one option in "maritial status" form.

6. "Health Behavior" form should be checkbox form, because it should be possible to select multiple listed options from "Health Behavior" form.
